

Rabbit Anti-Human MAGE-A1 Monoclonal Antibody (Clone SP188)

CATALOG #:

M4880 0.1 ml rabbit monoclonal antibody purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

M4882 0.5 ml rabbit monoclonal antibody

purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

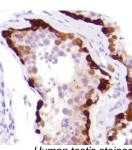

M4884 1.0 ml rabbit monoclonal antibody

purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

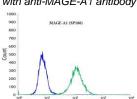

sodium azide.

M4881 7.0 ml pre-diluted rabbit monoclonal antibody purified by protein A/G in

TBS/1% BSA buffer pH 7.6 with less than 0.1% sodium azide.

Human testis stained with anti-MAGE-A1 antibody

Western Blot analysis of HeLa cell lysate with anti-MAGE-A1 antibody

kDa 250

Flow cytometric analysis of rabbit anti-MAGE-A1 (SP188) antibody in A431 (green) compare to negative control of rabbit IgG (blue)

INTENDED USE: For Research Use Only. Not for use in diagnostic procedures.

CLONE: **SP188**

IMMUNOGEN: Synthetic peptide derived from the C-terminus of human MAGE-A1 protein.

IG ISOTYPE: Rabbit IgG EPITOPE: Not determined MOLECULAR WEIGHT: 34 or 46 kDa

SPECIES REACTIVITY: Human (tested). (See www.springbio.com for information on species reactivity predicted by

sequence homology.)

DESCRIPTION: Melanoma-associated antigen 1 (MAGE-A1) is one of the melanoma associated antigens (MAAs).

MAGE-A1 is highly expressed in testis and some human solid tumors such as melanoma, brain tumors of glial origin, neuroblastoma, non-small cell lung cancer, breast, gastric, colorectal, ovarian

and renal cell carcinomas.

APPLICATIONS: Immunohistochemistry (IHC), Western Blotting and Flow Cytometry

IHC PROCEDURE: Specimen Preparation: Formalin-fixed, paraffin-embedded tissues are suitable for use with this

primary antibody.

Deparaffinization: Deparaffinize slides using xylene or xylene alternative and graded alcohols. Antibody Dilution: If using the concentrate format of this product, dilute the antibody 1:100. The dilutions are estimates; actual results may differ because of variability in methods and protocols. Antigen Retrieval: Boil tissue section in 10mM citrate buffer, pH 6.0 for 10 min followed by cooling at room temperature for 20 min.

Primary Antibody Incubation: Incubate for 10 minutes at room temperature.

Slide Washing: Slides must be washed in between steps. Rinse slides with PBS/0.05% Tween. Visualization: Detect the antibody as instructed by the instructions provided with the visualization

system.

IHC POSITIVE CONTROL: Testis

WESTERN BLOTTING: Recommended starting protocol: Dilute the antibody 1:400. Incubate for 1 hour at room

temperature.

The dilution is an estimate; actual results may differ because of variability in methods and protocols.

Optimal dilution and procedure should be determined by the end user.

WESTERN BLOTTING POSITIVE CONTROL:

HeLa Cell Lysate, A431 Cell Lysate

4300 Hacienda Drive Pleasanton, CA 94588 www.springbio.com

Tel: 1-925-474-8440 Toll Free: 1-800-787-6896

Fax: 1-925-474-8469

FLOW CYTOMETRY: Recommended starting protocol: Dilute the antibody 1:400. Incubate for 30 minutes at 4°C.

The dilution is an estimate; actual results may differ because of variability in methods and protocols.

Optimal dilution and procedure should be determined by the end user.

FLOW CYTOMETRY POSITIVE CONTROL:

A431 Cell Line Cytoplasm, Nucleus

CELLULAR LOCALIZATION: STORAGE & STABILITY:

Store at $2-8^{\circ}$ C. Do not freeze. The user must validate any other storage conditions. When properly stored, the reagent is stable to the date indicated on the label. Do not use the reagent beyond the

expiration date.

There are no definitive signs to indicate instability of this product; therefore, positive and negative

controls should be tested simultaneously with unknown specimens.

If unexpected results are observed which cannot be explained by variations in laboratory procedures and a problem with the reagent is suspected, contact Technical Support at spring.tech@ventana.roche.com.

WARNINGS & PRECAUTIONS:

 Avoid contact of reagents with eyes and mucous membranes. If reagents come into contact with sensitive areas, wash with copious amounts of water.

2. This product is harmful if swallowed.

3. Consult local or state authorities with regard to recommended method of disposal.

4. Avoid microbial contamination of reagents.
