IgG (blue)

(SP66) antibody in MCF7

negative control of rabbit

Rabbit Anti-Human Bcl-2α Monoclonal Antibody (Clone SP66)

M3660 0.1 ml rabbit monoclonal antibody purified by prote

antibody purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

M3662 0.5 ml rabbit monoclonal

antibody purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

M3664 1.0 ml rabbit monoclonal

antibody purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

M3661 7.0 ml pre-diluted rabbit

monoclonal antibody purified by protein A/G in TBS/1% BSA buffer pH 7.6 with less than 0.1% sodium azide.

INTENDED USE: For Research Use Only. Not for use in diagnostic procedures.

CLONE: SP66

IMMUNOGEN: Synthetic peptide corresponding to N-terminus of human $Bcl-2\alpha$.

IG ISOTYPE: Rabbit IgG
EPITOPE: Not determined
MOLECULAR WEIGHT 25-26 kDa

SPECIES REACTIVITY: Human (tested). (See www.springbio.com for information on species reactivity predicted by

sequence homology.)

DESCRIPTION: Expression of Bcl-2alpha oncoprotein inhibits the programmed cell death (apoptosis). In most

follicular lymphomas, neoplastic germinal centers express high levels of Bcl-2alpha protein,

Human tonsil stained

with anti-Bcl-2α antibody

whereas the normal or hyperplastic germinal centers are negative.

APPLICATIONS: Immunohistochemistry (IHC) and Flow Cytomtetry

IHC PROCEDURE: Specimen Preparation: Formalin-fixed, paraffin-embedded tissues are suitable for use with this

primary antibody.

Deparaffinization: Deparaffinize slides using xylene or xylene alternative and graded alcohols. **Antibody Dilution:** If using the concentrate format of this product, dilute the antibody 1:100. The dilutions are estimates; actual results may differ because of variability in methods and protocols. **Antigen Retrieval:** Boil tissue section in 10mM citrate buffer, pH 6.0 for 10 min followed by cooling

at room temperature for 20 min.

Primary Antibody Incubation: Incubate for 30 minutes at room temperature.

Slide Washing: Slides must be washed in between steps. Rinse slides with PBS/0.05% Tween. **Visualization:** Detect the antibody as instructed by the instructions provided with the visualization

system.

IHC POSITIVE CONTROL: Tonsil

FLOW CYTOMETRY: Recommended starting protocol: Dilute the antibody 1:100. Incubate for 30 minutes at 4°C.

The dilution is an estimate; actual results may differ because of variability in methods and protocols.

Optimal dilution and procedure should be determined by the end user.

FLOW CYTOMETRY

POSITIVE CONTROL: MCF7 Cell Line
CELLULAR LOCALIZATION: Cytoplasm, Membrane

STORAGE & STABILITY

Store at 2-8°C. Do not freeze. The user must validate any other storage conditions. When properly stored, the reagent is stable to the date indicated on the label. Do not use the reagent beyond the expiration date.

There are no definitive signs to indicate instability of this product; therefore, positive and negative controls should be tested simultaneously with unknown specimens.

If unexpected results are observed which cannot be explained by variations in laboratory procedures and a problem with the reagent is suspected, contact Technical Support at spring.tech@ventana.roche.com.

WARNINGS & PRECAUTIONS:

- Avoid contact of reagents with eyes and mucous membranes. If reagents come into contact with sensitive areas, wash with copious amounts of water. This product is harmful if swallowed.
- 2.
- 3. Consult local or state authorities with regard to recommended method of disposal.
- Avoid microbial contamination of reagents.
