Western Blot

HeLa cell lysate

analysis of

with Cdk2

antibody

Human tonsil stained with

anti-Cdk2 antibody

Rabbit Anti-Human Cdk2 Monoclonal Antibody (Clone SP80)

CATALOG #:

M3800 0.1 ml rabbit monoclonal antibody purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

M3802 0.5 ml rabbit monoclonal antibody purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

M3804 1.0 ml rabbit monoclonal antibody purified by protein A/G in PBS/1% BSA buffer pH 7.6 with less than 0.1%

sodium azide.

M3801 7.0 ml pre-diluted rabbit monoclonal

antibody purified by protein A/G in TBS/1% BSA buffer pH 7.6 with less

than 0.1% sodium azide.

INTENDED USE: For Research Use Only. Not for use in diagnostic procedures.

CLONE:

IMMUNOGEN: Synthetic peptide corresponding to C-terminus of human Cdk2 protein.

IG ISOTYPE: Rabbit IgG FPITOPF-Not determined

MOLECULAR WEIGHT: 33 kDa

SPECIES REACTIVITY: Human (tested). (See www.springbio.com for information on species reactivity predicted by

sequence homology.)

DESCRIPTION: Cdk2 is a member of the Ser/Thr protein kinase family. It is highly similar to the gene products of

S. cerevisiae cdc28, and S. pombe cdc2. It is a catalytic subunit of the cyclin-dependent protein kinase complex, whose activity is restricted to the G1-S phase, and is essential for cell cycle G1/S phase transition. This protein associates with and is regulated by the regulatory subunits of the complex including cyclin A or E, CDK inhibitor p21Cip1 (CDKN1A) and p27Kip1 (CDKN1B). Its activity is also regulated by protein phosphorylation. Two alternatively spliced variants and multiple

transcription initiation sites of this gene have been reported.

APPLICATIONS: Immunohistochemistry (IHC) and Western Blotting

IHC PROCEDURE: Specimen Preparation: Formalin-fixed, paraffin-embedded tissues are suitable for use with this

primary antibody.

Deparaffinization: Deparaffinize slides using xylene or xylene alternative and graded alcohols. Antibody Dilution: If using the concentrate format of this product, dilute the antibody 1:100. The dilutions are estimates; actual results may differ because of variability in methods and protocols. Antigen Retrieval: Boil tissue section in 1mM EDTA, pH 8.0 for 10 min followed by cooling at

room temperature for 20 min.

Primary Antibody Incubation: Incubate for 30 minutes at room temperature.

Slide Washing: Slides must be washed in between steps. Rinse slides with PBS/0.05% Tween. Visualization: Detect the antibody as instructed by the instructions provided with the visualization

system.

IHC POSITIVE CONTROL: Tonsil

WESTERN BLOTTING: Recommended starting protocol: Dilute the antibody 1:100. Incubate for 1 hour at room

temperature.

The dilution is an estimate: actual results may differ because of variability in methods and protocols. Optimal dilution and procedure should be determined by the end user.

STORAGE & STABILITY:

Store at 2-8°C. Do not freeze. The user must validate any other storage conditions. When properly stored, the reagent is stable to the date indicated on the label. Do not use the reagent beyond the expiration date.

There are no definitive signs to indicate instability of this product; therefore, positive and negative controls should be tested simultaneously with unknown specimens.

If unexpected results are observed which cannot be explained by variations in laboratory procedures and a problem with the reagent is suspected, contact Technical Support at spring.tech@ventana.roche.com.

WARNINGS & PRECAUTIONS:

- Avoid contact of reagents with eyes and mucous membranes. If reagents come into contact with sensitive areas, wash with copious amounts of water. This product is harmful if swallowed.
- Consult local or state authorities with regard to recommended method of disposal.
- Avoid microbial contamination of reagents.
